## PROFESSIONAL SUMMARY

---

Fullstack Developer specializing in backend development with NestJS and TypeScript. Over the past 2+ years, I've built payroll, attendance, recruitment, and employee management systems, focusing on reliable APIs, multi-tenant architecture, and PostgreSQL. I enjoy turning complex business requirements into clean, maintainable backend code.

## EDUCATION

---

### President University

*B.Sc. Informatics Engineering — GPA 3.78 / 4.00*

**Cikarang, Indonesia**

*Aug 2021 – Dec 2024*

## EXPERIENCE

---

### PT Indonesia Kreatif Teknologi

*Full Stack Developer*

**Jakarta, Indonesia**

*Sept 2025 – Present*

- Architected and developed core backend services for a multi-tenant HRIS, including payroll, attendance, employee management, and authentication.
- Built a compliance-critical payroll engine that calculates salaries, overtime, BPJS contributions, tax deductions, bonuses, and monthly payroll previews with auditable business rules.
- Developed attendance and workforce management APIs with tenant-level data isolation for multiple client organizations.
- Delivered the SOS incident reporting, chatbot, and article management modules for DevisaKu, a platform supporting Indonesian migrant workers.
- Designed recruitment APIs for WorkNation, covering job postings, application workflows, employer management, and candidate status tracking.
- Implemented responsive React dashboards for Lariesin POS, connecting inventory and cashier interfaces to live backend services.

### Proxycurl

*Software Engineer*

**Singapore**

*Nov 2024 – Jan 2025*

- **Built sandbox mode for the public API**, letting customers trial integrations against safe responses before touching production data.
- **Resolved defects and tuned performance** across production **Python**, **Flask**, and **Jinja2** services powering a customer-facing data API.
- **Modelled and queried data in PostgreSQL**, shaping storage and access patterns for the product's core datasets.
- **Partnered with cross-functional teams** to scope and ship new features, with a standing focus on system reliability.
- **Ran branch, review, and release workflow in Git** across a distributed engineering team.

### Qbit, PT Vanz Inovatif Technology

*Full Stack Developer Intern*

**Jakarta, Indonesia**

*Mar 2024 – Nov 2024*

- **Delivered RESTful APIs in Node.js and TypeScript**, specified and contract-tested in **Swagger**.
- **Built a React CMS** that let non-technical staff publish and edit content without developer involvement.
- **Maintained and debugged production React websites**, shipping regular updates and clearing defect backlogs.
- **Introduced TypeScript across server-side code**, strengthening type safety and clarifying contracts between client and server.
- **Modelled and managed application data in PostgreSQL** for storage, retrieval, and reporting.

**M-knows Consulting, PT Menara Indonesia***Backend & Database API Developer Intern***Jakarta, Indonesia***Aug 2023 – Dec 2023*

- **Ran delivery as project PIC**, coordinating scheduling, facilitating communication across the team, and resolving obstacles through to handover.
- **Built backend features in Express.js**, managing the HTTP request workflow between client and server.
- **Integrated TypeScript into the codebase**, adding a type-safety layer and improving readability for the whole team.
- **Modelled and managed data in PostgreSQL**, verifying every endpoint in **Postman** before release.

**Bangkit Academy by Google, Tokopedia, Gojek & Travel***Cloud Computing Cohort***Jakarta, Indonesia***Feb 2023 – Jun 2023*

- **Built and deployed backend services in JavaScript and Hapi**, hosted on **Google Cloud Platform** App Engine.
- **Architected highly available cloud infrastructure** on GCP through structured mentoring on cloud fundamentals and backend application design.
- **Implemented logging, monitoring, and observability** in Google Cloud, enabling preventive and corrective troubleshooting.
- **Shipped a capstone application** with a cross-functional team, owning the cloud computing and backend layer end to end.

**ORGANISATIONAL EXPERIENCE**

---

**PUMA Computing, President University***Committee Lead & Student Welfare Advocate***Cikarang, Indonesia***Dec 2021 – Jan 2023*

- **Led documentation and networking** for Temu Alumni, building a lasting alumni record and driving participant engagement with speakers and guests.
- **Coordinated guard and accommodation teams** for Computing Atmosphere, assigning scope across members and supporting attendees on site.
- **Ran fundraising for Computing Visit**, sponsorship outreach, social and email campaigns, and collaboration with alumni relations and marketing.
- **Represented student welfare to university administration**, escalating student concerns and providing crisis support alongside student government.

**PERSONAL & GROUP PROJECTS**

---

**CheAT Application Cloud Engineer***Node.js, Hapi, MySQL, Google Cloud Platform May 2023 – Jun 2023*

- **Built and deployed the backend API in Node.js and Hapi** to App Engine on **GCP**, making endpoints reachable across environments.
- **Provisioned MySQL on GCP** for user data, daily trackers, and recipes, and configured **IAM** access so the team could collaborate alongside a deployed ML model.
- **Authored the backend API documentation** at project close.

**Eye Care Mobile App Backend Developer***TypeScript, MySQL, Google Cloud Platform Jan 2024*

- **Built and deployed TypeScript endpoints on Google Cloud Platform**, backed by a **MySQL** store for user and service data.
- **Developed the product landing page** in HTML, CSS, and JavaScript.

**TECHNICAL SKILLS**

---

**Languages:** TypeScript, JavaScript, Go, Python, SQL**Frontend:** React, Next.js, HTML5, CSS3, Bootstrap**Backend:** NestJS, Node.js, Express.js, Flask, Hapi

**Databases:** PostgreSQL, MySQL

**Messaging:** RabbitMQ

**Cloud:** Google Cloud Platform — App Engine, IAM, Networking & Security, Logging, Monitoring & Observability

**Tools:** Git, Swagger, Postman
